Contribution of Each Member – Automated Household Inventory & Intelligent Consumption Analytics System(HI-CAS)

R. Surya Teja (2500030548) – Item Entry & Initialization

Focus:
- Dictionaries
- User input handling
- Data initialization

Work:
- Implement functionality to add new items
- Store item name, quantity, and threshold
- Initialize usage tracking

Contribution:
- Developed item entry functionality
- Designed inventory data structure
- Ensured proper validation for duplicate items

L. Sai Venkat (2500030926) – Inventory Visualization

Focus:
- Data display
- Looping
- Output formatting

Work:
- Display all items in the inventory
- Show quantity and usage details
- Handle empty inventory condition

Contribution:
- Developed inventory display functionality
- Implemented clear output format
- Ensured proper data presentation

V. Sohan Sukumar (2500031381) – Consumption Tracking System

Focus:
- Conditional logic

- Data updating
- Input handling

Work:
- Update item usage based on user input
- Reduce stock quantity after usage
- Track total consumption

Contribution:
- Developed usage tracking functionality
- Implemented stock validation logic
- Ensured accurate tracking of usage data

S. Bhagyasri (2500031184) – Low Stock Alert System

Focus:
- Looping
- Conditional checking
- Monitoring system

Work:
- Identify items below threshold level
- Display low stock items
- Handle case when no items are low

Contribution:
- Developed low stock checking functionality
- Implemented threshold comparison logic
- Ensured effective stock monitoring

K. Sreerupa (2500030683) – User Interface & Control Flow

Focus:
- Menu-driven programming
- Function integration
- Program flow control

Work:
- Design main menu system
- Handle user choices
- Integrate all functionalities

Contribution:
- Developed menu-driven interface
- Controlled program execution
- Ensured smooth integration of all parts
